

Java

```
class Solution {  
    public int[][] rotateGrid(int[][] grid, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[][]} grid  
 * @param {number} k  
 * @return {number[][]}  
 */  
var rotateGrid = function(grid, k) {  
  
};
```

TypeScript

```
function rotateGrid(grid: number[][], k: number): number[][] {  
  
};
```

C++

```
class Solution {  
public:  
    vector<vector<int>> rotateGrid(vector<vector<int>>& grid, int k) {
```

```
}  
};
```

C#

```
public class Solution {  
    public int[][] RotateGrid(int[][] grid, int k) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun rotateGrid(grid: Array<IntArray>, k: Int): Array<IntArray> {  
  
    }  
}
```

Go

```
func rotateGrid(grid [][]int, k int) [][]int {  
  
}
```
